

Making the complex simple.

Intelligent software for the international energy and utilities markets.

Enhanced transparency for renewable energy

- Improve transparency with itemized reporting that lists the component costs of energy production e.g. wholesale energy, REC's, and Tariffs
- Generate accurate invoices per generation type, improving budget forecasts
- Validate invoices in line with PPA
- Monitor and reconcile actual usage against forecast to improve budgeting
- View live market Half Hourly performance, monitoring energy generation levels and associated income per day/week/month/year
- Display complex data in simple graphical form
- Applicable across different energy generation sources
- User-friendly dashboard
- Intuitive navigation
- All your generation price and production in one place
