

Making the complex simple.

Intelligent software for the international energy and utilities markets.

Your virtual energy manager

- Virtual energy management
- Receive notifications when usage falls outside of set tolerances
- Quantify carbon footprint in compliance with regulatory requirements
- Manage and monitor consumption and costs, Generate invoices based on sub metering data, ideal for facilities management companies
- Improve transparency with itemized reporting that lists all components of energy costs

- Validate invoices for multi-utilities
- Compares different sites/regions using a 'league table' facility, encouraging responsibility at local level
- Suite of consumption and cost reporting services
- Bespoke dashboard to measure energy consumption against operational performance
- Display complex data in simple graphical form
- User-friendly dashboard
- Intuitive navigation
